ABOUT ME

Fullstack developer experienced in building production-grade web platforms end-to-end from PostgreSQL schema design and Express/Django APIs to React frontends and cloud deployment. Strong background in real-time systems (WebSockets), authentication, payments, and concurrency-safe backend architectures.

EXPERIENCE

Stealth AI Startup

July 2026 – Present

Founding Engineer

Hybrid

- Building React Native and Swift mobile apps end-to-end for iOS and Android, from payments with RevenueCat through App Store and Play Store submission.
- Owning the backends powering the apps, shipping with Expo, EAS Build, and Xcode.
- Building Meta Ads automation pipelines in Python.

Talkamore

April 2026 – June 2026

Founding Engineer

Remote

- Built and designed the product end-to-end across web and mobile for both App Store and Play Store.
- Owning system design and the core backend, with a focus on scalability and real-time features.
- Shipping production features in a fast-moving early-stage team.

Krane Apps

September 2025 – April 2026

Blockchain and Backend Developer

Remote

- Building backend services and on-chain integrations for client products.
- Working across Web3 tooling and Solana program interactions.
- Delivering APIs and data flows that power web and mobile clients.

PROJECTS

Talkamore | TypeScript, Next.js, WebSockets, LLM APIs, PostgreSQL, Prisma, Redis

🔗 Live

- Built an **AI companion app** for reflective journaling and emotional support, owning system design and the core backend across web and mobile.
- Engineered **real-time streaming LLM conversations** with low-latency token streaming over WebSockets, context/memory management, and prompt orchestration for coherent multi-turn sessions.
- Built a concurrency-safe backend (PostgreSQL + Prisma, Redis pub/sub) scaling persistent connections horizontally, plus subscription billing, authentication, and rate-limited APIs.
- Shipped a shared cross-platform stack powering both web and native mobile clients from a single backend.

KodeZilla.io | TypeScript, Express.js, Bun, Prisma, PostgreSQL, React, Docker

🏠 GitHub

- Built a **full-stack competitive programming contest platform** with role-based access (creator/contestant), contest management, MCQ & DSA submissions, and a **live leaderboard**.
- Implemented **JWT**, Zod validation, and rate-limited APIs on a backend with PostgreSQL.
- Architected a React frontend served via a Bun proxy that routes `/api/*` to the backend through a single origin, containerised with **Docker Compose**.

ChatLo.io | Node.js, TypeScript, WebSockets, React, AWS EC2, Nginx, Cloudflare

🏠 GitHub | 🔗 Live

- Built a **full-stack real-time chat application** with WebSocket-based broadcasting, private DMs, group rooms, typing indicators, and multimedia.
- Implemented rate limiting, persistent socket connections (no polling overhead), and a mobile-first responsive UI.

playTo-pay | Django, DRF, PostgreSQL, Celery, Redis, React, Docker

🏠 GitHub | 🔗 Live

- Engineered a **merchant payout engine** for Indian merchants enabling payment accumulation and bank withdrawals, with concurrency-safe ledger accounting, no stored balance column to prevent drift.
- Implemented **database-level locking** with idempotency via unique constraints, and atomic transactions binding balance checks to fund debits.
- Built a state machine preventing illegal status transitions and **Celery-based retry workers** with Redis for failed-payout recovery; deployed via Docker Compose.

TECHNICAL SKILLS

Languages & Frontend: TypeScript, JavaScript, Python, SQL, React, Next.js, Tailwind CSS, Framer Motion

Backend: Node.js, Express.js, Bun, Django, Celery, REST APIs, WebSockets

Databases & DevOps: PostgreSQL, Prisma, Redis, Docker, AWS (EC2), Nginx, PM2, CI/CD

Mobile: React Native, Swift, Expo, EAS Build, Xcode, RevenueCat

EDUCATION

Indian Institute of Technology, Guwahati

2025 – 2029

Bachelor of Science in Computer Science

Guwahati, Assam
